Operating Temperature	-4˚F a 140˚F
Exposure & Light Control	Automatics

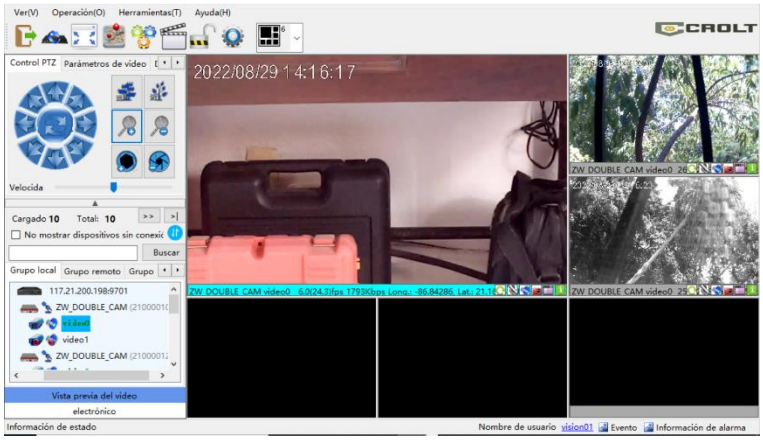
Accesories

Developed specifically for the use of the **CROLT VISION Dual Action GPS Camera**, it is designed to take advantage of the camera beyond the helmet. This simple accessory allows CROLT VISION cameras to be securely mounted to flat surfaces, tripods, gun rails and the universe of sports camera mounts.

When operations do not require the use of a helmet, the shoulder support provides an ideal alternative wearing solution. Secured with industrial grade Velcro®, it is compatible with vests, chest harnesses, packs and other shoulder straps.

And when the camera is not being used CROLT VISION, protect it with MOLLE compatible.

The CroltVision does not have an App for mobile devices, however, it does have software for live transmission in real time, as well as GPS location. This allows you to watch the stream from anywhere, as connecting a device via Bluetooth requires you to be no more than 10m away from the camera and can be distracting.



To facilitate the operation, the CroltVision camera has a **Remote Control** that shows, by means of an **INDICATOR LED**, the status of the camera and battery level.

CROLT VISION
